

SOFTWARE REQUIREMENTS SPECIFICATION

Podcast Guest Scheduling & Outline Builder

1 Introduction

Purpose: Defines the requirements for the Podcast Guest Scheduling & Outline Builder, which supports podcast guest interview scheduling and preparation.

Scope: Covers interview-slot selection and booking, guest discussion topics and biography links, booking and slot management, blocked dates, booking confirmation, calendar invite, and formatted PDF production sheet generation.

Definitions, Acronyms, Abbreviations: SRS - Software Requirements Specification; FR - Functional Requirement; NFR - Non-Functional Requirement; UML - Unified Modeling Language.

Reference Documents: Requirements Table; UML Use-Case Diagram; Use-Case Flow Specification; Lab 1: Requirements Engineering & UML Use-Case Modelling.

Overview: Section 2 gives the overall system description and Section 3 lists the specific requirements.

2 Overall Description

Product Perspective: A podcast guest scheduling system used by Podcast Guest and Show Host, with Calendar Service involved in the booking confirmation and calendar-invite process.

Product Functions: View available interview slots; book interview slots; submit discussion topics and reference links; manage bookings and interview slots; manage blocked dates; send booking confirmation and calendar invite; generate a formatted PDF production sheet.

User Characteristics: Podcast Guest selects an interview slot, provides discussion information and receives booking confirmation. Show Host manages bookings, interview slots and blocked dates.

Constraints: Booking is dependent on available interview slots and blocked dates maintained by the Show Host. Calendar-invite functionality depends on the Calendar Service. Booking details and guest topics are restricted to authorized users.

Assumptions and Dependencies: The Podcast Guest has access to the system; the Show Host has updated interview time slots and blocked dates; at least one interview slot is available for booking.

3 Specific Requirements

Req ID	Type	Description	Priority
FR-001	Functional	The system shall allow guests to view and select interview time slots based on the availability.	High
FR-002	Functional	The system shall allow guests to submit bullet structured bullet points for discussion topics along with biography links.	Medium
FR-003	Functional	The system shall allow Show Host to manage the guest bookings and interview time slots.	High
FR-004	Functional	The system shall send a booking confirmation to the guest which includes, the slot booked, calendar invite sent, and topic outline attached to episode board upon a successful booking.	High
FR-005	Functional	The system shall prevent the guests from booking blocked dates and notify them with a failed booking message when they attempt to book blocked dates.	Medium
NFR-001	Non-Functional (Performance)	The show outline generator must compile the guest topics, submitted, into a formatted PDF production sheet within 1 second after the guest topics are submitted.	High
NFR-002	Non-Functional (Security)	The system shall restrict the access of the booking details and guest topics to only the authorized users.	High

Key Use Case - Book Interview Slots: The Podcast Guest accesses the interview scheduling system, views available slots, selects a slot, confirms the booking, and the system records the booking, marks the slot unavailable, and sends a booking confirmation and calendar invite. If the selected date is blocked, the system displays a failed booking message and shows other available booking slots.
