

Podcast Guest Scheduling & Outline Builder

Complete_Requirements_Table

Req ID	Type	Description	Priority	Acceptance Criteria	Rationale
FR-001	Functional	The system shall allow guests to view and select interview time slots based on the availability.	High	The guest should be able to see the available interview slots and select one of them. Slots that are unavailable should not be selectable.	This is one of the main features of the system since guests need a simple way to choose a suitable time for the interview.
FR-002	Functional	The system shall allow guests to submit bullet structured bullet points for discussion topics along with biography links.	Medium	The system should accept discussion points entered by the guest along with their biography links and save them successfully for later use.	Collecting these details beforehand helps the host understand the guest better and prepare topics for the episode.
FR-003	Functional	The system shall allow Show Host to manage the guest bookings and interview time slots.	High	The Show Host should be able to view the existing bookings and make changes to interview slots when required. Any updates made should be reflected in the system.	The host needs control over bookings and available slots to avoid scheduling issues and manage the interviews properly.
FR-004	Functional	The system shall send a booking confirmation to the guest which includes, the slot booked, calendar invite sent, and topic outline attached to episode board upon a successful booking.	High	Once a booking is completed successfully, the guest should receive confirmation of the selected slot along with a calendar invite. The submitted topic outline should also be available on the episode board.	This ensures that both the guest and the host have the necessary information after a booking is made and reduces the chances of confusion later.
FR-005	Functional	The system shall prevent the guests from booking blocked dates and notify them with a failed booking message when they attempt to book blocked dates.	Medium	If a guest tries to select a blocked date, the system should not allow the booking to go through and should clearly inform the guest that the booking has failed.	This helps avoid scheduling conflicts and ensures that dates marked as unavailable cannot be booked accidentally.
NFR-001	Non-Functional (Performance)	The show outline generator must compile the guest topics, submitted, into a formatted PDF production sheet within 1 second after the guest topics are submitted.	High	The generated PDF production sheet should be ready within 1 second after the guest submits their topics. This can be checked by measuring the time taken during testing.	A quick response is important so that the production information is available immediately without slowing down the workflow.
NFR-002	Non-Functional (Security)	The system shall restrict the access of the booking details and guest topics to only the authorized users.	High	Users who are authorized should be able to access the relevant booking and guest information, while anyone without permission should be denied access.	Booking details and guest information may contain private information, so access should be limited to the appropriate users.
